

GENESIS® Feeding System Breeder Pullets Management Guideline Mash, Crumble, or Pellet Feed type

Start-Up Guidelines:

1. Determine daily feed rations needed for hens and roosters.
 - Anticipate reducing feed rations 2% to 5% when using the GENESIS® Feeding System compared to traditional chain feeding systems.
2. Open brood windows on all feeders, see Figure 1.
3. Verify feed cone level setting is at the appropriate level. Chore-Time recommends #2 setting on all feeders to maintain a proper feed charge, see Figure 2.

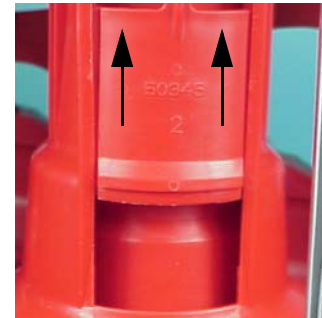

Figure 1. Open Brood Windows

Figure 2. Feed Cone Level #2 Setting

4. Lower feeder loops so feed pans rest on the floor while keeping suspension cables taut.
5. Verify all lights are operating properly to prevent dark spots or shadows around feeders.
6. Set Loop Controls to **AUTO** to activate control pan assemblies. Control pans are used to activate the feeding system.
7. Charge fill system(s) and feed loops with fresh feed just prior to bird placement. See system manual to determine estimated feed charge needed.

Operation Guidelines:

1. Maintain correct feeder height (check weekly), see Figure 3.

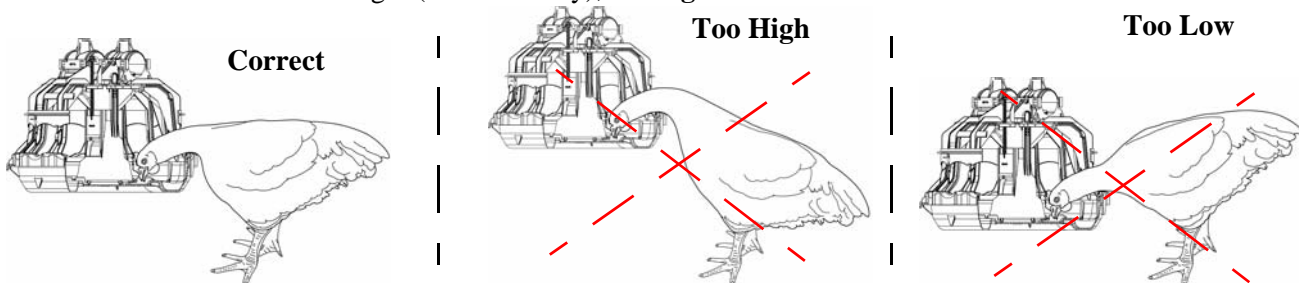

Figure 3. Feeder Height Adjustment

Week 3 - 21

2. Close brood windows at end of brood cycle, see Figure 4.
3. Set Loop Controls to **BY PASS** to deactivate control pan assemblies. Allow feeders to run continuously until daily feed rations have been depleted from the weigh bin.
4. Compare actual weight of flock to target weight and adjust feed ration as needed.
