

KONAVI® Pullet Breeder Feeder

Get Your Breeder Pullets Started Off Right

Let's grow together®

Patented (Additional Patents Pending)

The KONAVI® Pullet Breeder Feeder gives birds easy access to feed without stepping in it.

The Breeder Feeder that Lets Beaks In, but Keeps Feet Out

The KONAVI® Pullet Feeder from Chore-Time can aid producers in getting breeder pullet chicks started off right for producing improved early uniformity for the flock. With the KONAVI Feeder's low pan height and patented scalloped edge, pullet chicks learn to eat from the outside of the pan starting at day one, resulting in reduced feed contamination.

Count on Chore-Time for experience, reliability, performance and confidence.

KONAVI® Pullet Breeder Feeder

Lets Beaks In. Keeps Feet Out.

Get Chicks Started Right

The KONAVI® Pullet Feeder helps producers train young birds from day one for improved flock uniformity and less stress at feeding time. The KONAVI Feeder with its low pan height attracts young chicks. They tend to gather around the feeder to eat while ignoring supplemental feed trays. Each KONAVI Feeder has feed to offer the birds when restriction feeding starts. The low feed level contained in each pan throughout the house promotes calmer eating at the start of feeding time and discourages bird migration.

Maximize Feeder Space

Indexing feeder lines is the proven key to better feed distribution in a pullet house at feeding time. By indexing the feeder system, producers can help minimize bird migration and fighting over feeder space at the start of feeding time because indexing spreads the feed around the house evenly. Indexing also aids the goal of having the optimum number of birds around each feeder pan.

Grill-less Feeder Pan Design

Designed with a unique angled cone and anti-rake fins, the KONAVI Pullet Feeder discourages birds from stepping into the pan and wasting feed. No grill means no birds getting trapped in the feeder. No birds caught in the feeder reduces potential bird mortality while also saving the time spent getting birds out of the feeder.

Simpler Flock Management

- Chore-Time's KONAVI Feeder easily handles mash, crumbles and other forms of feed.
- Easy to manage, the KONAVI Feeder has a flood setting and three grow-out settings.
- The feeder's easy to set feed level won't get knocked out of adjustment by growing birds.
- Keeping birds out of the feeder means bird droppings are kept out of the pan and feed hygiene is improved.
- Litter is kept out of pan and, as a result, producers don't have to blow litter out of the feeder.

Let's grow together®

Floor Activated Flood

- Start KONAVI® pans on the floor to provide a higher level of feed to attract day-old chicks.
- KONAVI's taller flood window allows more feeders to flood on uneven floors.
- Raise the feeder just off the floor around day 10 to take feeders out of flood.

Other KONAVI® Pullet Feeder Features

- Made using heavy-duty, durable plastic.
- Engineered to resist the degrading effects of ultraviolet light.
- The eating area of the pan bottom is 0.15 inches (3.8 mm) thicker for long life.
- Two-piece top is standard.
- Retrofittable onto existing indexed lines.
- KONAVI Feeder lines can be looped or configured as straight-line systems.
- Low feeder lip height offers greater distance between bottom of feeder and shavings when lifted into grow out position. This helps keep litter out while also dealing with uneven litter height.
- The KONAVI Pan attachment features a hinge to allow the pan swing down for easy cleaning and drying between flocks.

Feeder Dimensions

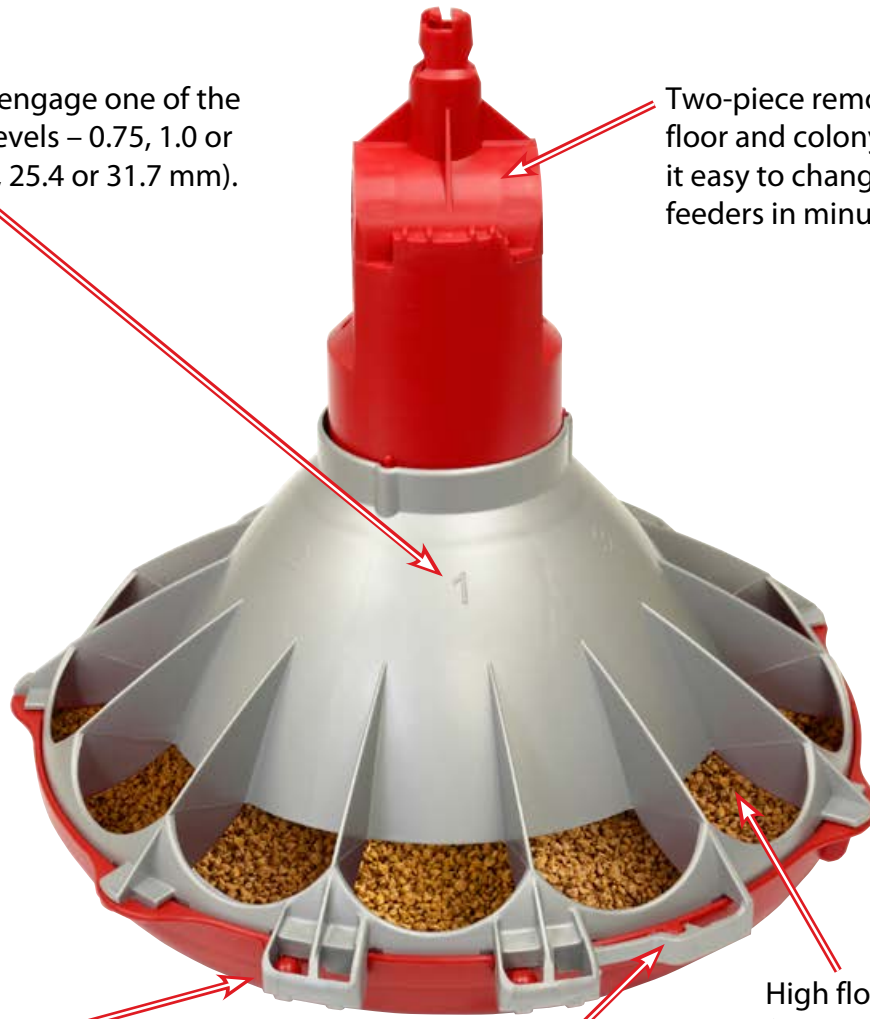

Pan diameter	13.06 inches (332 mm)
Pan height at lowest point	1.93 inches (49 mm)
Eating spaces	14

Rotate feeder to engage one of the three grow-out levels – 0.75, 1.0 or 1.25 inches (19.0, 25.4 or 31.7 mm).

Two-piece removable top with floor and colony options makes it easy to change out damaged feeders in minutes.

**Patented
(Additional Patents
Pending)**

Cones include a hinge for hanging pans.

Pan in locked position.

High flood window flows feed to the far edge of the pan in a full 360 degrees.

Designed for Global Poultry Production

Chore-Time engineers designed the KONA VI® Pullet Feeder from the ground up to meet the needs of global feeding practices and houses where minimal or no litter is used. With an ultra-low pan height, it lets the smallest chicks reach the feed even when they are not boosted by the height of the litter. Its simple design also works well in a wide variety of traditional breeder production environments.

Count On It

Chore-Time has been a leader in poultry and egg production systems since 1952. We have the experience to deliver complete solutions for feeding, feed handling, drinking, egg handling, climate control and management systems. You can count on Chore-Time and your independent Chore-Time distributor for equipment reliability, production performance and ultimate confidence.
